

KRYPTONITE

Our drag link is compatible on trucks with up to a 6" lift with the stock pitman arm in use. Lifted trucks with a drop pitman arm in place may run into issues getting the steering wheel straight. If this is the case with your truck you will need to go back to a stock pitman/track bar mount. Below is an example photo showing optimal geometry for your steering linkage. Please contact our technical support if you have questions.
