

Product Specification

90 x 90 Blinds Box

Blinds Box is used to discreetly hide Roller blinds in any type of window to create a sophisticated and minimalist look. Provides a clutter free finish with your window blinds hidden within the ceiling.

Made from extruded aluminium, Blinds Box has a removable cover plate that conceals the blind from view. Builders need to frame out accurately to allow the Blinds Box to fit. The extrusion has endcaps available, supplied in pairs. Blinds can be chain control or automated. Trimming of the removable cover plate is required for chain control blinds.

To achieve a flush plastered finish install timber to 15mm above bottom of profile (as shown below in red). Install 12.5mm plasterboard (as shown below in green) and 2.5mm skim to a flush finish.
